

MINDSIGHT CLINICAL ASSESSMENT REPORT

System Architecture Version 3.8 · Unified Multi-Domain Diagnostic Profile

Patient ID: MS-20260620_121514-ANONYMOUS

Age: 21 yrs

Sex / Demographic Cohort: Male

Domain 1: Personality Vectors Placement: EXT: 0.3 EST: 0.7 AGR: 0.6 CSN: 0.0 OPN: 0.4 <i>Drivers: Emotional_Stability (+0.7), Agreeableness (+0.6), Openness (+0.4)</i>	Domain 2: Self-Esteem Matrix Placement: RSE Score: 21/30 (Normal) <i>Drivers: General Self-Satisfaction (+2.0), Feelings of Devaluation or Inadequacy (-2.0), Perceived Competence Relative to Peers (+2.0)</i>
Domain 3: Mood & Sleep Dynamics Placement: PHQ-9 Sum: 14 (Moderate Depression) Sleep: 5.5h <i>Drivers: Symptom Burden Summation (+14.0), Calculated Sleep Duration (-2.0)</i>	Domain 4: Digital & Social Dynamics Placement: Addiction: 31.0 Loneliness: 53.28 <i>Drivers: Academic or Work Output Decline (+0.5292), Social Over-Allocation Online (+0.4569), Emotional Distress when Offline (-0.3723)</i>
Domain 5: Occupational Burnout Index Placement: Index: 7.075 (Severe Burnout Indication) <i>Drivers: General Perceived Stress Load (+1.02), Imminent Milestone / Schedule Stress (+0.96), Subjective Work-Life Equilibrium (+0.84)</i>	Domain 6: Severe Clinical Screening Placement: Mild Symptomatic Profile [■■ ATYPICAL] <i>Drivers: Active Social Withdrawal / Avoidance (+8.1305), Maladaptive Rumination Cycle (+7.316), Acute Cognitive Blocking under Stress (+7.3143)</i>

SYNTHESIZED GLOBAL PROFILE OVERVIEW

COMPLEX PROFILE EVALUATION: Unsupervised screening models flag an atypical response configuration. While tracking markers align closely with the Mild Symptomatic Profile, the overall structure falls outside standard baseline distributions concurrently with elevated clinical metrics (PHQ-9 Sum: 14). A comprehensive professional differential evaluation is recommended to reconcile these mixed indicators.
