

MINDSIGHT CLINICAL ASSESSMENT REPORT

System Architecture Version 3.8 · Unified Multi-Domain Diagnostic Profile

Patient ID: MS-20260620_130625-ANONYMOUS

Age: 21 yrs

Sex / Demographic Cohort: Male

Domain 1: Personality Vectors Placement: EXT: -0.4 EST: 0.4 AGR: 0.6 CSN: 0.4 OPN: 0.0 Drivers: Agreeableness (+0.6), Extraversion (-0.4), Emotional_Stability (+0.4)	Domain 2: Self-Esteem Matrix Placement: RSE Score: 21/30 (Normal) Drivers: General Self-Satisfaction (+2.0), Feelings of Devaluation or Inadequacy (-2.0), Perceived Competence Relative to Peers (+2.0)
Domain 3: Mood & Sleep Dynamics Placement: PHQ-9 Sum: 7 (Mild Depression) Sleep: 8.0h Drivers: Symptom Burden Summation (+7.0), Calculated Sleep Duration (+0.5)	Domain 4: Digital & Social Dynamics Placement: Addiction: 25.0 Loneliness: 53.28 Drivers: Emotional Distress when Offline (-0.3723), Fear of Missing Out / Digital Dependence (-0.3585), Feeling Superficially Connected (-0.2703)
Domain 5: Occupational Burnout Index Placement: Index: 5.341 (Moderate Burnout Profile) Drivers: Workplace Peer & Structural Support (+0.9), Imminent Milestone / Schedule Stress (+0.84), Operational Choice & Task Agency (+0.84)	Domain 6: Severe Clinical Screening Placement: Mild Symptomatic Profile [■■ ATYPICAL] Drivers: Active Social Withdrawal / Avoidance (+8.1305), Acute Cognitive Blocking under Stress (+7.3143), Compulsive Behavioral Patterns (+7.1883)

SYNTHESIZED GLOBAL PROFILE OVERVIEW

COMPLEX PROFILE EVALUATION: Unsupervised screening models flag an atypical response configuration. While tracking markers align closely with the Mild Symptomatic Profile, the overall structure falls outside standard baseline distributions concurrently with elevated clinical metrics (PHQ-9 Sum: 7). A comprehensive professional differential evaluation is recommended to reconcile these mixed indicators.
